#### **INSTRUCTIONS FOR MAINTENANCE/CLEANING**

It is recommended to periodically clean the products in order to maintain their long-term attractive appearance.

The parts in contact with water should be wiped with a soft cloth to prevent the accumulation of limestone.

Clean normally using liquid soap mixed with water.

#### **FOR STAINLESS SURFACES:**

If the surface is exposed to aggressive environments, such as high humidity, salt (vicinity of the sea), chlorine (pools), hard water, etc., it requires additional cleaning with a cleaning agent containing silicone.

#### **MAINTENANCE AND CLEANING TIPS**

Dirt and limestone accumulating around glass beams and other parts can be removed with a water and vinegar mixture (cca. 10ml in 1 litre of water).

Thereafter wash the elements using liquid soap and sponge and rinse with clean water.

#### **CAUTION**

It is not recommended to use liquid cleaning products with sharp particles or cleaning products containing chlorine acid, bleach, ammonia, acetone, acid for home use, different disinfectants, cleaning vinegar, or rough cleaning sponges and sponges made of steel wool.

The use of these products can permanently damage the surface. In this case, the manufacturer will not assume responsibility for any damage.
